SUMMARY

Data & Business Analyst with a medical device engineering background, a Springer-published research paper, and an MBA in supply chain risk management. Built a relational tracking system for 150+ medical devices across 40+ hospitals; completed an end-to-end supply chain analytics project on the Olist dataset (SQL, BigQuery, Power BI). Seeking a Data or Business Analyst role in HealthTech, e-commerce, or logistics.

EDUCATION

Management Consulting (Master of Business Administration) — **University of Applied Sciences and Arts Northwestern Switzerland** — 07/2021 – 11/2024
5.0/6.0 • Ho Chi Minh City
Thesis: Improving firm performance of Biomedical equipment distributors in Vietnam through Supply chain risk management. (5.5/6.0)

Engineering Physics (Bachelor of Engineering) — **HCMC University of Technology** — 2014 – 2019
Ho Chi Minh City
Thesis: Analysis of the brain's response to stimulus signals. (9.42/10)

EXPERIENCE

Service Engineer (Ho Chi Minh City) — **ETC Medical Equipment Co., Ltd** — 09/2025 – Present

- Serviced endoscopy equipment (scopes, light sources, processors) for hospital clients across southern and central Vietnam — intake, inspection, installation, and fault resolution with the manufacturer.
- Designed and built a relational equipment-tracking application (AppSheet, star schema) managing the full lifecycle of over 150 endoscopy units across over 40 hospital clients and 12 categories, replacing manual Excel tracking. Modeled three linked tables (equipment transitions, product records by hospital, contacts) with relational references, computed fields, and photo documentation to keep data accurate and verifiable.
- Produced analysis from the tracked data, including equipment distribution by type, to surface which scope categories move most frequently.

Career Break - MBA & Upskilling — **Self-directed** — 08/2022 – 08/2025

- Completed MBA at FHNW with a thesis on supply chain risk management for medical equipment distributors in Vietnam.
- Self-studied SQL, R and data analysis (Udemy, Google Data Analytics); built portfolio projects including a Michelin Guide EDA in Python.

Application Engineer (Ho Chi Minh City) — **Anh Khoa Medical Equipment Co., Ltd** — 03/2019 – 07/2022

- Compared product configurations against tender requirements to support bid preparation for medical equipment.
- Maintained and reviewed equipment configuration records to ensure accuracy across procurement documentation.
- Presented product capabilities to prospective clients and supported vendor engineers during equipment demos and delivery.

PROJECTS

Olist E-commerce & Logistics Analytics 2026

SQL · BigQuery · Power BI

- Ingested and profiled a multi-table e-commerce dataset in BigQuery; built two validated mart tables for delivery and order-item analysis.
- Analyzed the delivery chain to surface delayed and stuck orders, then visualized findings in a Power BI dashboard.

https://github.com/LeonTran29/Project_Olist

Michelin Guide Restaurant Distribution Analysis 2021

- Analyzed global distribution of Michelin-starred restaurants in Python (pandas, seaborn), comparing star ratings across regions to identify geographic concentration and market gaps.
